PROFILE

Frontend developer and Computer Systems Engineering graduate with experience in React, JavaScript, TypeScript, and Tailwind CSS. I have built web and mobile applications, consumed REST APIs, and automated tasks with Python. Looking for an internship or junior web development role where I can contribute and keep growing.

SKILLS

Programming Languages

- JavaScript/TypeScript
- Python
- HTML5
- CSS

Frameworks & Libraries

- React
- Tailwind CSS
- Capacitor
- Flet
- Bootstrap

Tools & Technologies

- Git / GitHub
- Vite
- REST APIs.
- Task automation with Python

Languages:

Spanish ● ● ● ● ●

English - B2 ● ● ● ○ ○

PROFESSIONAL EXPERIENCE

S-FX
Frontend Developer
12/2023 – 02/2024 | Remote
Developed website components in WordPress using the Bricks builder, complemented with HTML, CSS, and JavaScript.

EDUCATION

Computer Systems Engineering
UTEL Universidad
2021 – 2025 | Graduate

CERTIFICATIONS & COURSES

- TypeScript - Fernando Herrera
- React – Fernando Herrera
- JavaScript – ALURA / Oracle
- Python – Nicholas Schurmann

PROJECTS

Focus (App)
— Vite, Capacitor, React
Mobile app to create and track custom routines, such as workouts, study sessions, or daily habits.

- Restructured the project into reusable components to improve scalability and maintainability.
- Centralized state logic with useReducer, simplifying components and making the data flow easier to follow.
- Chose Capacitor to reuse my React code and bring the app to mobile without rewriting the interface.

ImagenJS (Web)
Minimalist website designed to compress and resize images.
— TS/JS

- Compresses images directly in the browser using the Canvas API.
- Implemented image upload via drag and drop.

YT Video Downloader (App)
Desktop app to download media content, with no separate backend needed.
— Python, Flet

- Chose Python for its ecosystem of download libraries and Flet to build the interface without leaving the same language.
